

Syncarpha Capital

Financial Analyst, Project & Corporate Finance

New York, NY | Full-time | Hybrid On-site (NYC office) Tuesday, Wednesday and Thursday

About Syncarpha

Founded in 2009 and headquartered in New York City, Syncarpha Capital develops, finances, owns, and operates solar and energy storage projects across North America. Our portfolio spans community solar, on-site systems for municipalities, utilities, and businesses, and small utility-scale projects. We partner with experienced developers, EPC contractors, and engineers to take projects from site acquisition and financing through decades of operation.

We are a lean, entrepreneurial team. Analysts here work directly with senior leadership, see their analysis shape real investment and financing decisions, and are mentored by a management team with deep experience in investment management, project finance, and renewable energy. As our portfolio continues to grow, we are adding a Financial Analyst to our finance team.

The Role

The Financial Analyst sits at the center of how Syncarpha evaluates, finances, and manages its solar and storage portfolio. Working closely with Chief Investment Officer (CIO) and Director of Project Finance, you will own key project financial models, support tax equity and debt financings, and work with development/construction teams to help to price and manage new deals. It is a hands-on role with broad exposure across the business, well suited to someone who wants to build deep project finance expertise while seeing how every part of a renewable energy company fits together.

Responsibilities

Project Finance & Investment

- Build, maintain, and review project- and portfolio-level financial models for solar and storage assets, including cash flow projections, levered and unlevered IRR, NPV, DSCR, debt sizing, and sensitivity analyses.
- Support tax equity, tax credit transfer, construction debt, and term debt financings: prepare model outputs, manage due diligence requests and data rooms, and coordinate with investors, lenders, counsel, and independent engineers through closing.
- Evaluate new development and acquisition opportunities, translating PPAs, leases, community solar subscription terms, interconnection costs, and incentive and REC revenue into clear investment forecasts for pricing recommendations.
- Support capital calls, funding requests, and tracking models with investors and financing sources

Cross-Functional Partnership

- Partner with Development, Engineering, Construction, Asset Management, and Accounting to keep model assumptions current, flag risks early, and connect financial forecasts to team goals.

Financial Analyst

- Improve and standardize modeling templates, data processes, and reporting workflows as the company scales.

Experience

Required

- Bachelor's degree in Finance, Accounting, Economics, or a related field.
- 2+ years of financial modeling experience in project finance, renewable energy, infrastructure, investment banking, private equity, or corporate FP&A.
- Advanced Excel skills, including the ability to build multitiered models for projects and portfolios
- Working knowledge of core project finance concepts: IRR, NPV, DSCR, debt sizing, and cash flow waterfalls.
- Comfort working with large data sets and turning them into clear, actionable conclusions.
- Strong written and verbal communication skills, with the ability to present analysis to senior leadership and external partners.
- Highly organized and detail-oriented, able to manage multiple deadlines in a fast-paced, entrepreneurial environment.
- Creating and managing critical path/issues lists for deals, managing project plan/steps for key deliverables due on financings including appraisals, cost segregation reports, third party forecasts

Preferred

- Experience with tax equity structures (partnership flip, sale-leaseback), tax credit transfers, or construction and term debt in renewable energy.
- Familiarity with distributed generation and community solar economics, PPA and lease structures, and state incentive programs.
- Understanding of federal renewable energy tax credits and how recent legislative changes affect project economics.
- Experience with Claude, Gemini, Smartsheet and other AI tools to automate tasks where available

Syncarpha Capital is an equal opportunity employer. We welcome applicants of all backgrounds and do not discriminate on the basis of race, color, religion, sex, sexual orientation, gender identity, national origin, age, disability, veteran status, or any other legally protected characteristic.
